Category:.rar Category:Compressed-file archive formats Category:Free audio software Category:Free audio software with closed source Category:Free audio software Category:Media, MandalayQ: Typo3: How to customize the settings for the extension "Postext" when using Code-Injection I want to customize the POSText-Settings for my typo3-8.7.0-beta2-stable release. As far as I understood, in order to do so, I need to inject some code into the pageTS.tt_content.php. But I can't find any example of how to do so. Can anyone tell me how to do so, or give me any references where I can learn more about this? Thanks in advance! A: In 8.7 as default the core_config_data is from the \TYPO3\CMS\Frontend\Config\Typo3conf\Typo3conf.php. In that file you have the definition of your_postext_setup. The

code is define('my_postext_setup', array('label' => 'My PostExt Setup', 'userSettings' =>
$GLOBALS['TYPO3_CONF_VARS']['SC_OPTIONS']['sources']['my_postext_setup']['enabled'], 'content' => 'content',
'label_styled' =>'', 'pageType' => 'default', 'pageExt' => 'html', 'list_disable' => 0, 'list_enable' => 0, 'num_items_disable' => 0,
'num_items_enable' => 0, 'log_config' => '', 'log_debug' => 0, 'log_error' => 0, 'log_info' => 0, 'log_max' => 0, 'log_min' => 0,
'log_warn' => 0, 'log_debugtext' => 'Debug Text', 'log_payload' => 'User Payload', 'log_type_category' => 't3lib',
'log_type_element' => 't3lib', 'log_type_filesize' => 'Filesize ba244e880a
