Q: Javascript | Select multiple items in a listbox I have a listbox with "School" in the header and a list of student names in the listbox. I want to select "School" and "Name" in the listbox and store their values in a variable. I'm using this code var student = document.getElementById("StudentList").options[0].value; var school = document.getElementById("SchoolList").options[0].value; var sm = document.getElementById("StudentList").options[1].value; var sh = document.getElementById("SchoolList").options[1].value; document.getElementById("result").innerHTML = "The student: " + student + " The school: " + school + " The student's name: " + sm + " The school name: " + sh; But it does not seem to work. A: You can get the selected item's value by using the following code: document.getElementById("StudentList").options[0].selected You can get all the options values using the following method: document.getElementById("StudentList").options You can also get the selected item's value using the following code: document.getElementById("StudentList").selectedIndex Example (Note: I've changed the tag to ) Student 1 Student 2

Recent advances in digital imaging and computerized stereology have led to advances in quantitative morphometry. This technique uses image analysis and stereological principles to obtain data that are accurate, reproducible, and objective. The examples shown in this paper include 1) the use of an image analyzer to quantitate epidermal cell volume density, 2) the use of stereological principles to measure the volume of biopsied tissue, 3) the use of these same principles to determine volumetric densities of the various components of normal and diseased human skin, and 4) the use of these same principles to study volume density of the components of skin in normal animals.Toronto is the world's most crowded city, but it's also one of the most affordable, according to a study released on Thursday. In a study of 177 cities, Toronto was ranked 11th out of the world's 25 most crowded, with the vast majority of people sharing space on its streets. On a daily basis, about 8,000 people are crammed into the city's downtown core. But, according to a new study, the average person in Toronto is paying \$74 a month less for rent than the average person in a more crowded city, such as Tokyo. "We are among the most affordable cities in the world," said Anne Marie Aikins, a demographer at the University of Waterloo who co-authored the study. The city has long been known for its low rents. A hot real estate market and low construction costs have also made the city one of the more affordable among Canadian 2d92ce491b
