External features The Autodesk software does not require a Microsoft Windows operating system to be installed on the computer before using it. In order to run AutoCAD for the first time, a user is prompted to install a licensed copy of Windows 2000, Windows Server 2003, Windows Vista, Windows 7, or Windows 8. When that has been completed, the program is launched automatically. It may be installed on any version of Windows, including Windows 98, Windows ME, Windows 2000, Windows Server 2003, Windows XP, Windows Vista, Windows 7, or Windows 8. The program can be run directly from a USB flash drive or memory card. The AutoCAD 2013 stand-alone version for Linux is distributed with all Linux Live CDs and can be installed directly on any compatible Linux operating system. A Windows live DVD is also available, as are Linux live DVDs, containing both the AutoCAD software and the Linux operating system. There is also an online application. Traditionally, transducers such as motion sensors, pressure sensors, distance sensors, and the like, have been made from bulk silicon, which is processed using well known techniques into thin-film transducers. These traditional techniques are generally non-selective and, in many cases, create active devices on a surface of the silicon. Therefore, an additional step of selective oxidation is required to form an oxide layer on the surface of the silicon. The selective oxidation may be accomplished using such techniques as wet oxidation or high temperature dry oxidation. These techniques may be used to selectively oxidize silicon to form a silicon dioxide layer. Unfortunately, these techniques may result in the generation of unwanted defects that may make the silicon unsuitable for device or structural use. As such, a new
